TECHNICAL SKILLS

Languages: Python, JavaScript (ES6+), SQL, C++
Frameworks: React, FastAPI, Node.js, Tailwind CSS
Libraries: SQLAlchemy, Pydantic, REST with FastAPI, Tkinter
Databases: MySQL, MongoDB, PostgreSQL, SQLite, Firebase
Infra & Devops: Docker, Git, Jupyter
Data Analysis: Pandas, Numpy, Data Cleaning, EDA, Visualization (Matplotlib, Seabron)

EXPERIENCE

Cushman & Wakefiled - Software Developer | Mumbai, India

Nov 2025 – Present

CushmanAdvisory – Internal Management Tool

- Independently architected and developed a full-stack internal automation platform for Cushman & Wakefield's **Valuation & Advisory business**, supporting **RAA and TAM verticals** and streamlining multiple business workflows across **300+ active projects and 150+ users** using **React, FastAPI, Python, and Firebase**.
- Built and integrated multiple workflow automation modules, including **MIS Analysis, Cost Analysis, Approval Analysis, Escrow Reconciliation, Collection Mapping, and automated Word Report Generation**, replacing time-intensive manual processes with centralized, data-driven workflows.
- Developed an intelligent **Collection Mapping solution** that leverages historical bank statements and MIS data to automatically identify and map incoming statements to the corresponding project/unit, reducing manual mapping effort from **3–4 hours to 10–15 minutes (~95% reduction in processing time)**.
- Engineered an **automated Word report generation pipeline** that processes analysed project data and generates structured reports, reducing report preparation time from **2–3 hours to 15–20 minutes (~90% reduction in turnaround time)**.
- Implemented **ML-driven anomaly detection** using **historical client datasets** and **predefined thresholds** to benchmark **vendor-quoted prices** against comparable records, automatically flagging **significant price deviations** and **potential pricing discrepancies** for further validation.
- Owned the **complete software development lifecycle**, independently handling frontend and backend architecture, database design, API development, authentication, deployment, production maintenance, and feature enhancements.

PROJECTS

Facial Recognition Attendance System / Python , OpenCV, HaarCascade, LBPH, Tkinter

- Engineered a real-time recognition pipeline using **Haar Cascade** for detection and **LBPH** for recognition, achieving **95%+ accuracy** across varying lighting, angles, and environmental conditions.
- Developed a **Tkinter-based desktop application** with role-based admin/user access for user registration, facial recognition, and automated attendance management.
- Integrated **OpenCV, Pandas, and NumPy** for image preprocessing, structured attendance data handling, and numerical operations, with **pyttsx3** providing real-time voice-based attendance notifications.
- Implemented an end-to-end attendance workflow covering **face registration, real-time recognition, automated attendance marking, and attendance record management**, with modular and device-tested components.

TRAYA: A Centralized Waste Management Solution / Next.js, CSS, JavaScript, Node.js, Flask, Pytorch, MongoDB, Docker | [LINK](#)

- Developed an AI-driven IoT platform using **Raspberry Pi** and **GPIO Zero** for real-time waste tracking, disposal monitoring, and data analysis.
- Built a **Flask (Python)** backend integrated with **MongoDB** for storing and managing waste collection data, and deployed a **PyTorch**-based multimodal classification model using **Docker** for scalable, production-ready waste segregation.
- Implemented a reward-based recycling system and AI-powered waste segregation with real-time hotspot monitoring, connecting users, collectors, and recyclers for efficient waste management.

EDUCATION

Vasantdada Patil College of Engineering

Bachelor of Engineering in Information Technology — Mumbai
(Honours in AI & ML)

Aug 2021 – Jun 2025

CERTIFICATIONS

IBM SkillsBuild — Artificial Intelligence & Machine Learning | **CSRBOX** — AIML Certification
